

THE SCHOOLS RECORD · PROFESSIONAL SERIES

ILLUSTRATIVE SAMPLE

A sourced examination comparison

Eton College and Westminster School · A-level grades at A* · 2015–2019

This sample demonstrates structure and editorial method using the frozen public dataset. It is not a recommendation or a claim that either school is better.

SAMPLE

Prepared
2 September 2026

01

EXECUTIVE READING

What is being compared

The share of published A-level subject entries awarded A* in each named examination year. The denominator is entries, not pupils or candidates.

QUALIFICATION A level only	GRADING SYSTEM A*–E
POPULATION Published subject entries	OUTCOME TYPE Exam grade, not destination

Interpretive limit

The series does not control for subject mix, prior attainment, cohort characteristics or admissions selection. The figures describe published outcomes; they do not identify causes.

02

EXACT-VALUE EXHIBIT

Five-year published record

A-level entries awarded A*, 2015–2019

Year	Eton College	Evidence	Westminster School	Evidence
2015	36.4%	Primary / Secondary	49.0%	Primary
2016	43.5%	Primary / Secondary	49.0%	Primary
2017	42.0%	Primary / Secondary	47.0%	Primary
2018	38.2%	Primary	48.0%	Primary
2019	38.3%	Primary	47.0%	Primary

Values are rendered directly from the immutable production snapshot. No missing year is estimated and no competing value is averaged.

03

METHOD NOTE

Why the boundary matters

This exhibit deliberately uses an A-level-only ruler. Cambridge Pre-U, IB Higher Level and school-defined mixed-qualification measures are not folded into it, even where a source supplies an equivalence.

Centre-assessed 2020 and teacher-assessed 2021 values are omitted from the default like-for-like series. Their absence is not treated as zero and the surrounding years are not joined through an inferred value.

Good comparison is often the discipline of refusing a convenient but false equivalence.
